INDUSTRIAL IOT PORTFOLIO MANAGEMENT

How NIS2 Will Impact the IoT Landscape:
Brake or Accelerator

Kris Van der Hoeven

Kris van der Hoeven, Co-Founder: With a deep background in IIoT solution architecture, business strategy, and project management, Kris brings extensive experience from roles at Inetum-Realdolmen, Deloitte, Verizon Business, and Econocom BeLux.

Our reason for being

LYXION
INDUSTRIAL IOT PORTFOLIO MANAGEMENT

New legislation impacts
existing and new IIoT solutions

Focus on “**what is**” and on “what **will be**”

Shadow IoT (70%)
Legacy IoT (30%)
New IoT

Next up

3 short examples of where NIS2
will play a role

Connected CNC machine

I don't need access to your network for maintenance,
I have a sim card

Connected coffee machine

My contract doesn't say anything about not listening to your conversations

NIS2

Facility management

Coffee machine

CISO / IT / OT?

Connected IoT device

Who cares if there is a **back door** on my chipset?

Who cares **where** the **firmware is written** and if it's ever updated?

I'm fun and I check the functional requirement boxes!

NIS2

Innovation?

OT?

IT?

Business unit?

Who can honestly say that they **have covered this today**?
Who can honestly say that **it's not important**?

So, let's zoom out

Essential **or not**

Security, continuity & Lifecycle management for full IoT chain

Considering

Security and continuity of **hardware & firmware**

Who support and who has end **responsibility**?

Which **processes** are added for Cyber and for Continuity?

**That's a lot of
extra work if
you do it for
each individual
solution**

NIS2 forces you:

- To take control
- To create corporate strategy

Sounds like a
break?

How can it be an IoT accelerator

Past versus future

=> we need to make a mind-shift

Solution focused bottom up

Silo solutions

Structure focused - top down

Tiered architecture

Jungle of IoT solutions – clean up and structure

Evolve from an ideation board towards a checklist approach

- Corporate IoT strategy
- Best practices & templates
- Tiered architecture
- Simplification & standardization

Jungle of IoT solutions – clean up and structure

By “Corporate” defined, clear roles and responsibilities

- IoT roles & responsibilities
- Internal IoT ecosystem
- External IoT ecosystem

Jungle of IoT solutions – clean up and structure

Need to introduce new processes for IoT management

Medium Critical solution

Allowed technologies

Supply chain

Sustainability checks

Allowed platforms

SLA's OLA's

Legal checks

Tax-fiscal options

Audit frequency

Patching & updates

Distribution checks

Security monitoring

Solution Reporting

How can it be an IoT accelerator?

NIS2 can be the catalyst to work structured, bring organizational changes, implement cross company IoT processes

- Defining the solution and technology options
- Standardization and use of architypes
- Implementation of predefined security and flexibility
- Outsourcing onboarding and device management
- Have structured involvement of your company stakeholders
- Allows you to work with shorter innovation tracks

Why else should you consider NIS2?

Transparency

Introduction of security standards

Data interoperability

Standardization of meta data for tax fiscal optimization

Cost optimization

Solution Manageability

It will let you sleep at night

Thanks for listening
